TECHNICAL REPORT

Guide to Cyber Security for Consumer Internet of Things

Q: How to implement the security measures of ETSI EN 303 645?
A: ETSI TR 103 621.

Example from ETSI TR 103 621:

6.9 Provision 5.3-1

"All software components in consumer IoT devices should be securely updateable". (ETSI EN 303 645 [i.1])

NOTE: Examples for this provision are also provided in ETSI EN 303 645 [i.1].

EXAMPLE 1: The secure update mechanism supports the device firmware and all third-party applications. The device firmware encompasses code running electronic components such as baseband processors, interface and networking chipsets, and sensors.

EXAMPLE 2: The device or hub accepts trusted updates that are signed by the manufacturer, which cover all device software components. The manufacturer is able to push updates to the device.

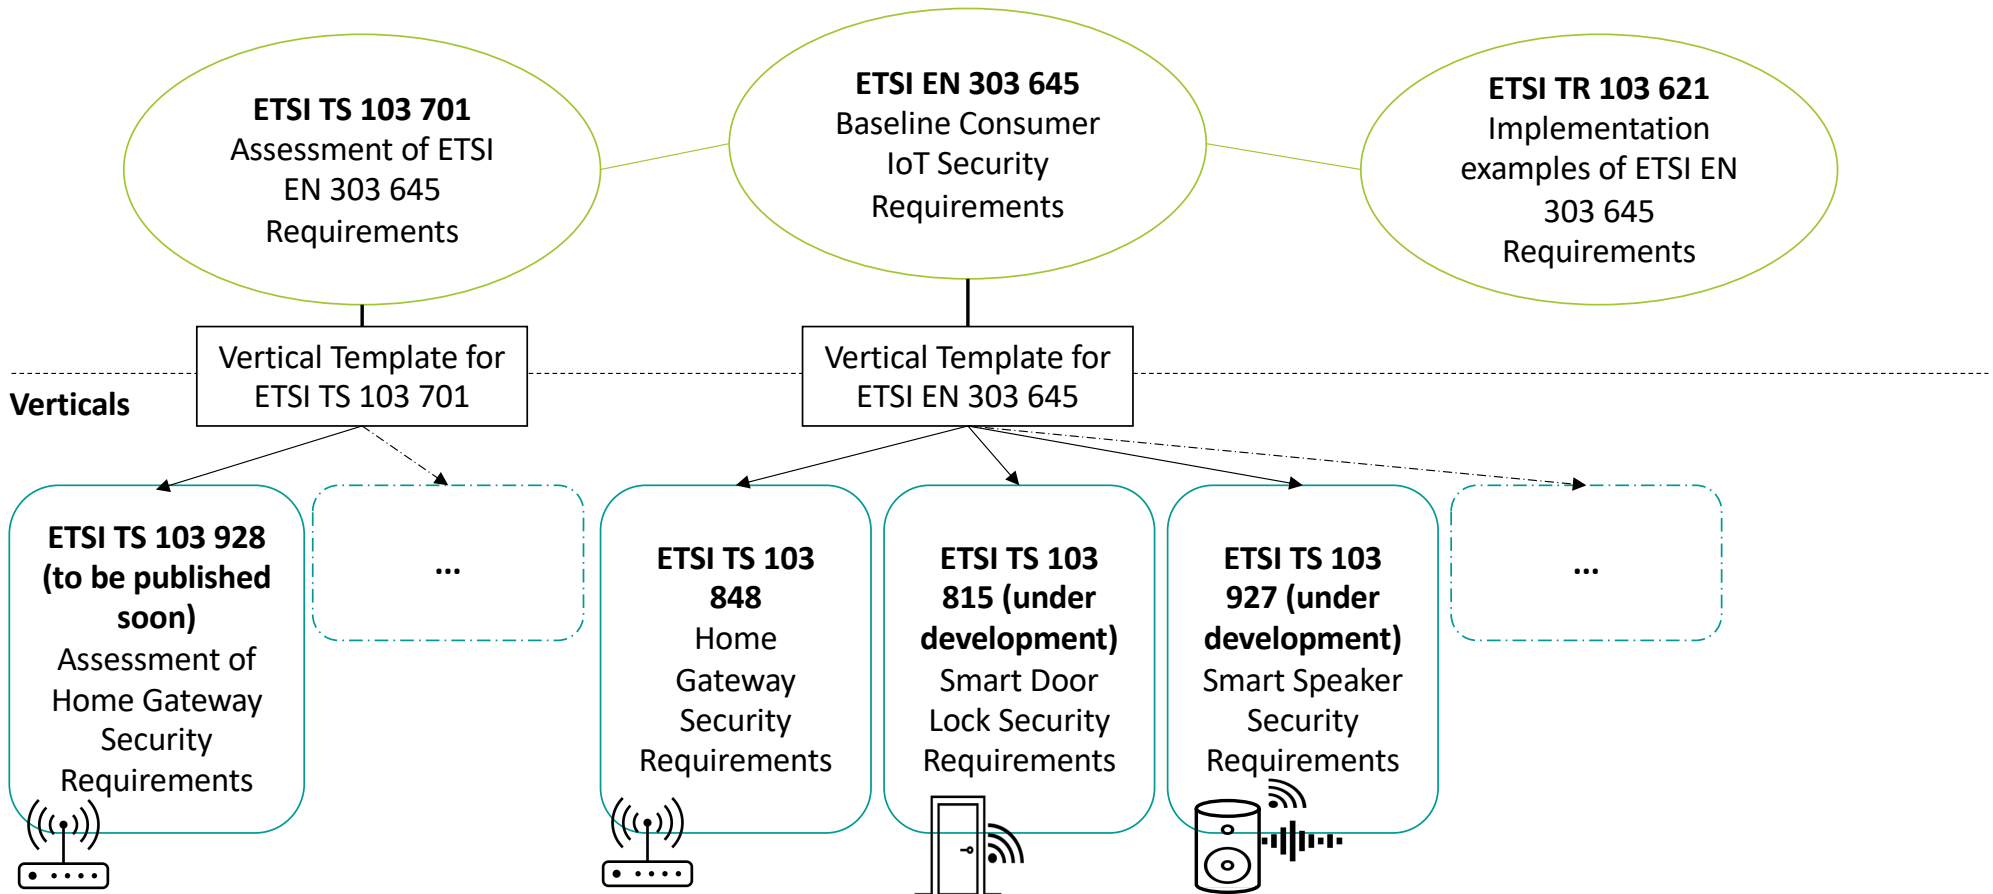

8.2.3 Provision 5.3-1

"All software components in consumer IoT devices should be securely updateable". (ETSI EN 303 645 [i.1])

EXAMPLE: The software of a battery charge controller is not meant to be modified once it has been vetted for safety.

Overview of ETSI's CloT security documents including **verticals**

Q: Are EN 303 645's security measures different or of different importance depending on the type of device?

A: See ETSI Verticals for the ETSI EN 303 645.

- Some possible modifications on security measures of ETSI EN 303 645 in a corresponding vertical
 - Promotion: make „should“ to „shall“
 - Exclusion: exclude a recommendation as it is not applicable to the device dealt with in the vertical
 - Extension: extending the original provision from the EN 303 645 with another related provision
 - ... (please see the vertical templates)
- Example (from ETSI EN 303 645):

Provision 5.3-1 All software components in consumer IoT devices should be securely updatable.

Vertical example - Smart Door Lock (SDL):

Provision SDL 5.3-1 (extended) An update of the device shall not change the locking status of the device.

NOTE: A lock, which was closed before an update, is still closed during and after an update.

Motivation

- The ETSI EN 303 645 requires a lot of security measures
- The ETSI TS 103 701 assesses the implementation of these security measures
- But how to implement these security measures?
- Are the security measures different or of different importance depending on the type of device?

Q: Are EN 303 645's security measures different or of different importance depending on the type of device?

A: See ETSI Verticals for the ETSI EN 303 645.

- ETSI TC CYBER created vertical templates for the ETSI EN 303 645 ecosystem:
 - to write vertical standards based on ETSI EN 303 645 and
 - to write vertical standards based on ETSI TS 103 701
- Verticals already publicly available:
 - ETSI TS 103 848 Home Gateway Security Requirements as ETSI EN 303 645 vertical
 - Smart Speaker Security requirements as EN 303 645 vertical (only intermediate draft version)
- Verticals under development:
 - Home Gateway Test Specification as TS 103 701 vertical (close to publication)
 - Smart Door Lock Security requirements as EN 303 645 vertical
 - Smart Speaker Security requirements as EN 303 645 vertical (final version)
