

Trust in the digital world:

Do we need a Zero Trust
paradigm for data and systems?

Omnisecure Berlin, 2026/01/21

HUMAN DETECTION ACCURACY: REAL vs. AI MEDIA

STUDY:
THE BLURRING LINES.
CAN YOU TELL?

PROVING IMAGE DATA INTEGRITY: THE RELEVANCE OF CONTENT AUTHENTICITY

ZERO TRUST: A PARADIGM SECURING THE DIGITAL REALM NOT ONLY IN NETWORKS BUT ALSO FOR DATA AND SYSTEMS

NEVER TRUST, ALWAYS VERIFY

Continuous authentication of all users and devices, regardless of location.

LEAST PRIVILEGE ACCESS

Granting only the minimum necessary access rights to data and systems.

CONTINUOUS MONITORING

Real-time visibility and analysis of network traffic and user activity.

ASSUME BREACH

Proactively plan for and contain potential security incidents.

ZERO TRUST APPROACH

DIGITAL DATA

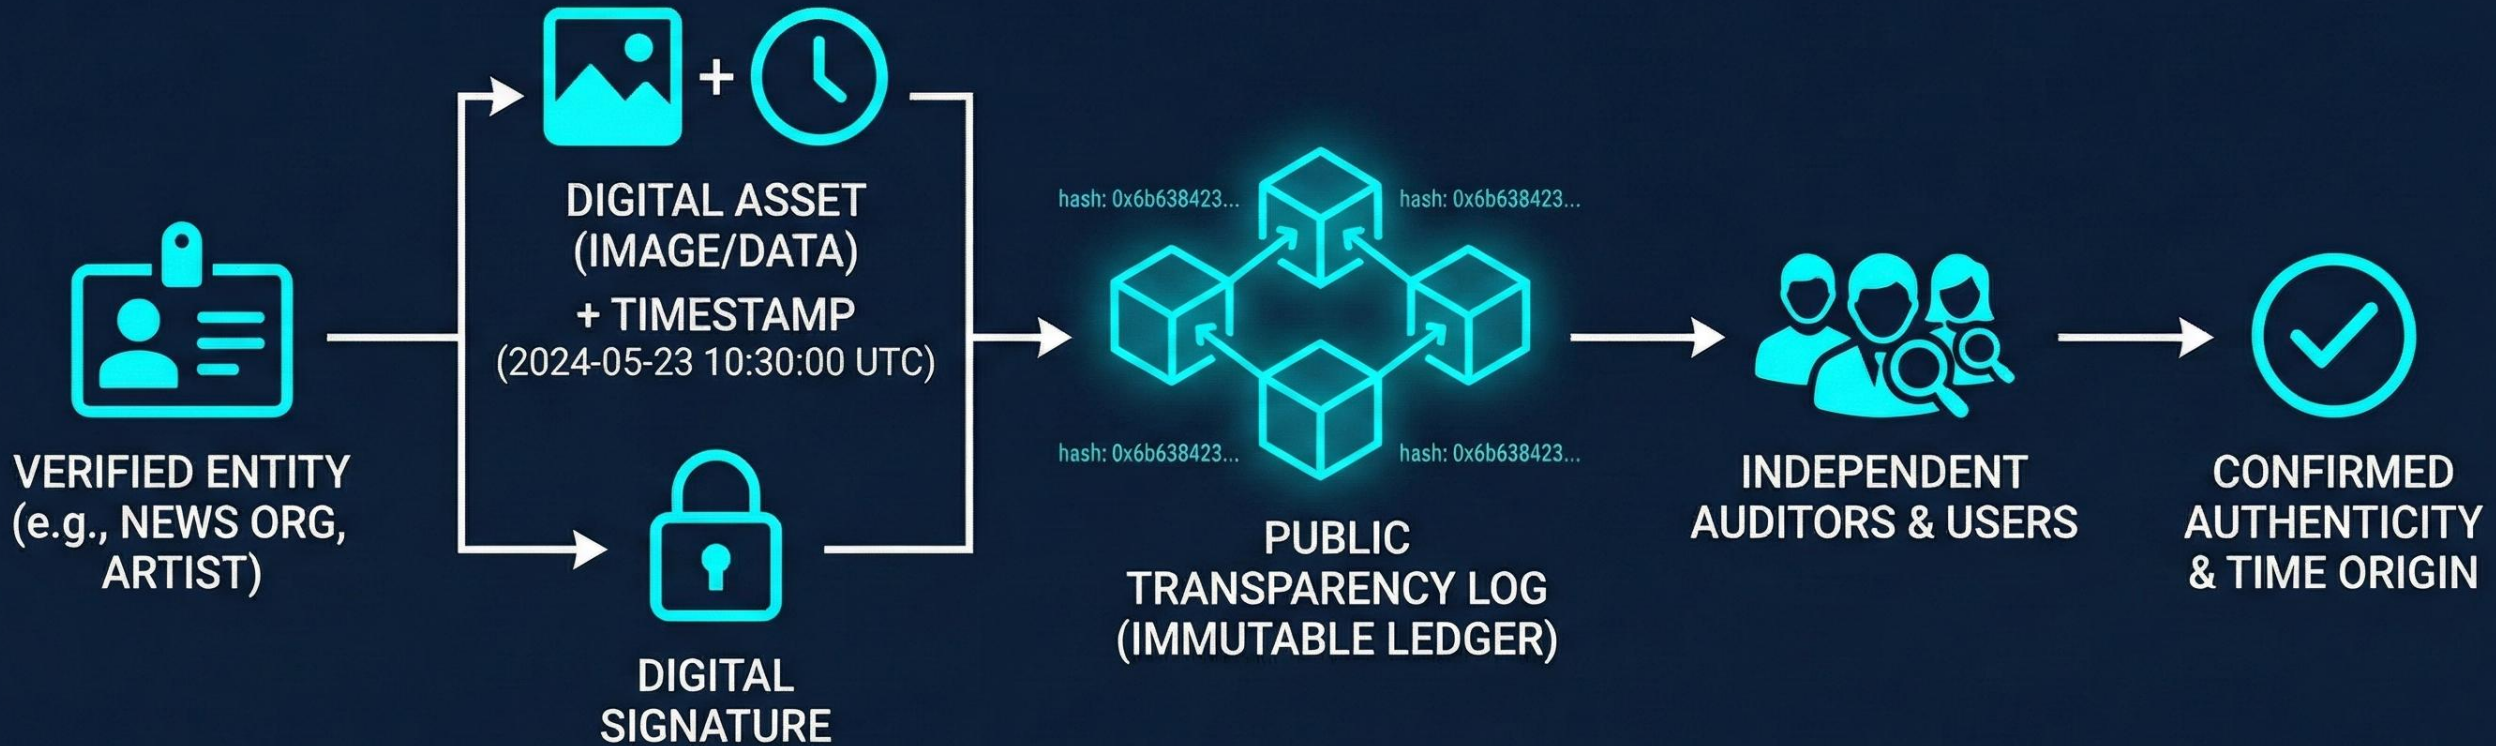

Protecting sensitive information at rest, in transit, and in use.

DIGITAL SYSTEMS

Securing infrastructure, applications, and connected devices.

SECURING DIGITAL PROVENANCE: THE TRANSPARENCY LOG ADVANTAGE

ADDITIONAL LAYER: LOGS ENSURE NO AFTER-THE-FACT TAMPERING OR DENIAL BY THE ENTITY. ✨

Vielen Dank!
